Ice Can Be Dangerous

- The Dangers of Ice Fishing Ice fishing injuries and fatalities are usually the result of hypothermia (a condition that dramatically lowers the body's temperature, causing severe metabolic dysfunction) or vehicle-related accidents.
- Some of the other common dangers of ice fishing include: Not dressing properly. Due to the risk of hypothermia, keeping your head, hands, and feet warm and dry is essential. Not packing adequate equipment. Death from drowning can occur
- Excessive alcohol consumption. Drinking alcohol can slow your reflexes and reaction time, which can be risky in the event of an emergency. Excessive drinking also increases your chances of getting hypothermia, because alcohol constricts blood vessels and lowers body temperature.
- Falling through thin ice. Ice doesn't freeze evenly on the surface of a lake or river, and thin patches can't always be detected by sight alone. Ice strength is affected by current, wind, and other factors. Thin ice will not sustain the weight of a human, let alone a snowmobile, all-terrain vehicle (ATV), or truck.
